

Cadence: a simple way to join in

Cadence suggests. You choose what feels right to say.

1

Turn on Listen

When people are talking, tap **Listen**. Allow your microphone only if you want live captions.

2

Read the reply cards

Cadence gets a few possible replies ready below the room caption.

3

Tap what sounds right

Tap a reply to speak it. Use **Refresh** if the conversation changes.

4

Take your own turn

Choose **Start something** when you want to begin a topic, not just respond.

5

Use fast backups

Choose **Hold the floor**, **My needs**, feelings, or a quick reaction when timing matters.

If a caption is not right

Use **Fix caption** before Cadence relies on uncertain words. Use **Who said this?** to give a caption speaker a local name. Cadence does not guess people by their voice.

Make it yours

Open **More** to choose Instant device voice or an OpenAI voice, add personal details, build your voice, or turn on scanning mode.

When you need a fallback

If the internet drops, quick phrases, My needs, saved replies, the backup board, and Instant device voice can still help. Tap **Stop** any time to stop audio.

Your privacy

Your active text session stays only in this browser for up to 24 hours. Use **More - Clear this session** when you are done. Cadence does not save microphone audio.
